

University of South Carolina Health Sciences Education Building

Knoll

Sector Focus: Healthcare

When the University of South Carolina renovated its Health Sciences Education Building, the university leveraged a contract with U.S. Communities and worked with Knoll dealer CBI Greenville to design classrooms and learning environments support group learning.

In The Lecture Hall, the ergonomic Generation by Knoll® task chair offers comfort and unrestrained movement, creating a space that supports a student-centered curriculum. The Lecture Hall also features wireless internet, tabletop microphone and power access, and illuminated glass panels to support work (cover). The Learning Studio features Chadwick® chairs

around circular tables to support small groups (left). A moveable central divider creates two spaces as needed and multiple monitors throughout the room ensure all students are engaged. The Multidisciplinary Lab, which is equipped for virtual microscopy and computer based lab exercises, features Propeller® Tables with peanut bases and Chadwick® chairs support efficient team learning (top right). In the Simulation and Standardized Patient Clinical Skills Center, the responsive Chadwick® Chair and ergonomic Sapper® Monitor Arm work in tandem to create a dynamic learning environment that accommodates a range of users (bottom right).
